Reference letter

We herein inform that Elproma Elektronika Sp. z o.o., executing works ordered by the Polish Air Navigation Services Agency (Pol. PAŻP), has made a specialized time synchronizing system provided for radio navigation and radiolocation (CNS) devices. The goal of the project was unification of UTC time delivery system dedicated to air traffic control systems span across the territory of Poland, its further development to cooperate with new modern satellite navigation systems Glonass/Galileo, creation of anticipated synchronization with reference to UTC(PL) and option of further integration with other UTC time scales of member states associated in EUROCONTROL, the European Organization for the Safety of Air Navigation.

Elproma was selected in the open tender (procedure 2008/PAŻP/53) and, as a result of a contract amounting to 0.5 mln US\$, it designed and implemented (2008-2009) the system based upon technology of autonomic, corporate local time scales. The project comprised state-of-the-art satellite technologies bolstered with atomic time patterns. The project, supervised by Mr. Tomasz Widomski, was given excellent marks, taking into account the technological background, and it had been implemented due to deadlines and with no complaints. Elproma proved to be a fully professional company operating in critical, in terms of safety, environment of air traffic control.
